

29-9-25

FC Basics

Find input voltage of FC

Powering FC from ESC

VTX

CAM, VI, (or) AC → for Camera
Video input

OSD → On-screen display (battery, signal %)

RC → FR sky (red bus)
Fly sky (I bus)
signals

Signal of RC to any RX (or) R pad of FC

↑ in FC indicates zero point

FC → Arm F4 series chip
Arm F7 series chip

Chips/parts in FC

OSD chip - controls video

Voltage regulators - 3.3V, 5V, 9V, 12V

IMU & Barometers

Blackbox chip (or) SD card

Japan Solderless Terminals - JST terminals

Pads in FC

G₁ - Ground

~~5V, 9V~~ 5V, 9V - Voltage pads (Battery powered)

4V5, 3V3 - 4.5V, 3.3V (USB powered)

V Bat - Voltage from battery (3S, 4S, 6S)
(output)

UART - TX and RX (two way comm)

(One pair acts like one usb port)

VTX, CAM → Camera in
→ Video transmit for FPV

LED, Buzzer (BZ)

SDA, SCL - Compass

M1, M2, M3, M4 (or) S1, S2, ... → Motor signal

Boot button
